United States

## Summary

Software Engineer with hands-on experience reviewing how software actually behaves, digging through complex UIs, and documenting clear, evidence-based findings across enterprise platforms and modern web apps.  I've worked a lot with ServiceNow forms, dashboards, admin workflows, service ops tools, and custom web systems, using structured testing, debugging, and review to catch issues, validate behavior, and help improve quality. I'm detail-focused and pretty comfortable with work that needs careful UI review, solid judgment, and clear written notes. I work well independently, follow guidelines closely, and I'm used to collaborating with remote teams across different technical environments. My background fits well with software QA, AI data evaluation, UI analysis, testing, and technical documentation — basically, work where accuracy, consistency, and paying attention to the small stuff really matter.

## Experience

### Autodesk

Senior Manager, Data & AI partnership
February 2024 - September 2026 (2 years 8 months)
San Rafael, California, United States

Worked across Autodesk's data, platform, and AI ecosystem, helping build partnerships that connected external data, technology, and enterprise workflows with Autodesk products.

- Owned partner relationships from early conversations through integration, launch, and ongoing growth.
- Worked closely with product, engineering, AI, and GTM teams to turn partner capabilities into practical customer solutions.
- Helped identify new opportunities around design data, APIs, automation, and AI-powered workflows.

- Supported integrations that connected Autodesk data with third-party platforms and enterprise systems.
- Worked with partners on product strategy, technical requirements, commercial models, and go-to-market plans.
- Kept things moving across a lot of teams — basically making sure the business side and the technical side were actually speaking the same language.
- Focused on partnerships that could improve customer workflows, expand platform adoption, and create long-term value.

### Paramount
Senior Software Engineer
February 2016 - December 2023 (7 years 11 months)
New York, NY

Integrated Stripe and PayPal APIs to deliver secure, scalable payment solutions, enhancing trust and reducing
transaction failures.  Deployed PayPal Express Checkout and Payments Pro for seamless multi-channel payments. Customized Stripe Elements and Checkout to boost conversion rates and streamlined subscription management with Stripe Billing. Optimized cloud infrastructure leveraging AWS services (EC2, S3, RDS, Lambda), leading to a 20% drop in operational costs and a 30% uplift in application responsiveness. Elevated platform accessibility by achieving WCAG compliance through strategic implementation of ARIA roles and semantic HTML, enhancing the user experience for all, including users with disabilities.
- Spearheaded the transformation of a legacy monolithic system into a microservices-based architecture, boosting scalability by 50% and slashing infrastructure costs by 40%.
- Engineered a suite of reusable software components adopted across multiple teams, cutting development cycles by 30% and enhancing cross-project consistency.
- Accelerated system performance by 69% through strategic refactoring of critical modules, introducing a high- efficiency shared library within a single sprint.
- Optimized database performance and scalability for Paramount+ by selecting PostgreSQL as the core RDBMS,
leveraging its robustness and advanced data type support.
- Strengthened data privacy and regulatory compliance (GDPR, CCPA) by designing and implementing an
encryption strategy using Bcrypt and instituting regular database audits.

- Improved database efficiency and system reliability through proactive maintenance, including vacuuming and
table analysis, ensuring peak performance and optimized storage.

### ServiceNow
Full Stack Engineer
November 2013 - November 2015 (2 years 1 month)
Santa Clara, California, United States

- Reviewed and enhanced interfaces across ServiceNow ITSM, ITOM, and CSM modules, interpreting UI elements, forms, workflow states, and service operations screens to support accurate enterprise process execution.
- Built custom UI actions, business rules, client scripts, and Service Portal components using JavaScript and
TypeScript, improving usability and functionality across internal tools, admin panels, and web applications.
- Created and modified Flow Designer and App Engine workflows to automate routine service processes, requiring precise understanding of user workflows, visible system states, and structured process logic.
- Documented requirements, implementation details, and review outcomes from sessions with product owners and senior engineers, turning complex software behavior into concise written explanations and actionable tasks.
- Supported structured quality review through code reviews, ACL updates, query optimization, ATF, Git-based
CI/CD, REST API integrations, IntegrationHub, and MID Server work, helping maintain consistency, accuracy, and
reliable platform behavior.

## Education

### University of Delaware
Bachelor of Science, Computer Science · (May 2010 - June 2013)
